Revisions List

1. - Page 2, Revise definition of mandatory fields.
2. - Remove all vendor-defined fields. The resulting space will be for future use.
3. - Remove all "checksum" fields. The resulting space will be for future use.
4. - Add field to A0 record (156/2) "submitted by LSC" for Top 16 tabulation.
5. - Page 19, D0 Record, "EVENT SEX Code 011" (67/1) make mandatory.
6. - Top 16 Pyramid(only) - allow multiple meets.
7. - Page 3, Revise phone number formatting restrictions.
8. - Page 3, Revise Time field format # 3.
9. - Remove H0 record.
10. - Page 3, Revise Name field format.
11. - Remove "Transaction" field from all records. The resulting space will be for future use.
12. - Page 10, B1 change "meet city" & "meet state" to M2.
13. - Page 13, C1 remove mandatory on "Region Code".
14. - Change each occurrence of "USS or other ID" to "USS#" and make M2.
15. - Remove any occurrence of "unique Event ID#". The resulting space will be for future use.
16. - Convert "admin info" fields in D1 to future use.
17. - Convert "middle initial" in D1 to future use.
18. - Remove "ANSWER Code 023" in all records, make future use.
19. - Change to M1: "meet name", "meet start" in B1. "TEAM code" "full team name" in C1.
20. - Change to M2: "date of swim" in D0&E0, "swimmer birth date" in D1 & F0, "ORG Code" in all records.
21. - Convert "flight status" in D0 to future use.
22. - Prelims & finals place and points are to be M1 for championship meets.

1. - Added a new record (D3) that includes the new USS# and swimmer's preferred first name.
2. - Revised pyramids to include the D3 record.
3. - Added field for SDIF version number to the A0 record at 4/8.
4. - Added definition of new USS# in the format design section.
5. - Added condition (#) to the D0 record to allow entry of relay only swimmers.
6. - Added definition for file extension (SD3) on page 2 under format design.
7. - Added fields for the submission of registration information to the D3 record.
8. - Added the definition of ETHNICITY Code 026.
9. - Added and defined a LOGICAL field type.
10. - Revised definition of Alpha data type to allow right justification of numeric data.
11. - Add back Event Numbers.
12. - Change participation selections in the D3 record.
13. - Implement new USS# and preferred first name in F0 instead of following F0 with a D3 record.

Introduction

United States Swimming has matured as an organization and expanded services to individuals and clubs. To support this expansion, USS has developed a computer plan. One component is a standard interchange format for technical data. Swimming data must be transmitted among the clubs, Local Swimming Committees (LSCs), and the USS headquarters office. Exchanging meet results is one example, where data from a host club is distributed to swimmers and clubs using diskettes or modems. Some LSCs are compiling swimmer statistics and would retype the data from printed sheets if electronic transmission were not available. A standard format promotes easy exchange of data and the development of new computer programs and services. The goal is to preserve the valuable efforts of our volunteers.

To develop this standard, United States Swimming established an ad-hoc committee to review existing needs and prepare a draft design. A representative from US Masters Swimming and a coach familiar with high school and college swimming requirements contributed significantly to the final design. The design is intended to allow all aquatic sports organizations to use the same standard. New records can be added, and new codes or fields can be added to existing records.

The format incorporates a modular design. Each file would combine the records into an order that corresponds to the type of data to be transmitted. Meet entry records would have a specific order. Time standards would have another order. When specific record types are not needed, those records can be omitted. Certain fields were declared to be "mandatory" for adequate identification of the data and to preserve unique identifiers.

!!! SDIF VERSION 3 DOCUMENT !!!

Format Design

SDI files have a SD3 extension. Example: meetrslt.sd3.

The basic design of the USS Interchange Format is a fixed record length for all records. Data is grouped together by type of information, and records are linked to each other by common fields or by record order. The records comprise a single type of information, e.g., one record for meet host data. The file structure has an implied order of less frequent data preceding more frequent data, i.e., one meet, multiple teams, multiple athletes per team, etc.

Each record is one-hundred sixty-two (162) bytes in length, with the last two bytes a carriage return and line feed. Byte 161 is an ASCII 13 and byte 162 is an ASCII 10. Each record has a two byte record identifier.

Coding conventions

The first byte of the first record MUST be the first byte of the file, and MUST begin an A0 record.

Fields which are not used should be blank filled.

"No blanks" means that there may not be ANY blanks ANYWHERE in the field; "non-blank" means that there MAY be blanks in the field, but there MUST be AT LEAST ONE non-blank character as well.

There are two levels of mandatory fields. M1 - must be included for the record to be useful. M2 - an exceptions report must be generated for records containing blank M2 fields. M2 fields are necessary for the records to be processed by USS. M1 fields require a non-blank entry.

All undefined space is named "future use" and MUST be blank until defined explicitly.

The first two bytes of a record are always CONST, and are case sensitive.

All ALPHA fields are left justified* and can contain any letters, numbers and printable symbols. Users may elect to have alphabetic data in upper and lower case or upper case only. *Alpha fields containing only numeric data should be right justified.

All INT data are stored as ASCII digits and should be right justified and blank filled.

All LOGICAL fields must contain a upper case 'T' an upper case 'F' or a blank.

!!! SDIF VERSION 3 DOCUMENT !!!

DEC numeric values are also ASCII digits and are right justified and blank filled. An optional decimal may be used if fractional values occur.

PHONE fields can be formatted in any manner that maintains the integrity of the number.

All DATE fields have the format MMDDYYYY where MM is the month, DD is the day, and YYYY is the year. If a date is supplied, it must not have ANY blanks -- zero-fill each portion of the date.

CODE fields must match EXACTLY when "table checked", and ARE case sensitive. The user should request new codes if required. The term "table checked" refers to the tables in the back of the SDIF document, not a file supplied by U.S. Swimming.

USPS designates U.S. Postal Service state abbreviations and should be capitalized.

POSTAL CODES may be left or right justified, but should include leading zeroes where defined (for example: a Vermont ZIP code of 05452).

All TIME fields MUST match one of the following formats:

- 1) All blanks.
- 2) Have the format mm:ss.ss where mm is the minutes value and ss.ss is the seconds value to hundredths. The third byte must be a colon or a blank, and the sixth byte must be a period. If a blank appears anywhere in this format, everything to the left must also be blank.
- 3) TIME Code 020, left-justified and blank-filled.

!!! SDIF VERSION 3 DOCUMENT !!!

The USSNUM format consists of: date of birth + first 3 letters of legal first name + middle initial + first 4 letters of last name. In the event that there is no middle initial or not enough letters in the first or last name to fill the field, an asterisk will be used. Special characters are removed.

Examples: Catherine A. Durance = 011553CATADURA

Cy V. Young = 091879CY*VYOUN

Thomas Chu = 020981THO*CHU*

Ty Lee = 011873TY**LEE*

Dave T. O'Neil = 030367DAVTONEI

If a time field is used, then the COURSE/STATUS code field immediately following (if present) must be entered also. When meets are timed finals only, the swim time should be entered in the Finals Time field.

A NAME type must be in the following format: last name followed by a comma and a space, followed by first name and an optional space and middle initial. Example: O'Neil, John Q

!!! SDIF VERSION 3 DOCUMENT !!!

Meet Pyramid

A0-File description rec first record in file, contains data on the file itself and identifies the vendor software.

B1-Meet rec one per file, contains data on type of meet, location, dates of competition.

B2-Meet host rec one or more per meet, contains meet host contact information

C1-Team ID rec one per team, contains data on team name, code, address.

C2-Team entry rec one per team, contains coach info plus stats on other records to follow for that team.

D0-Ind. event rec one per splash, contains data on athlete, event, stroke and distance, times, places and lanes.

D3-Ind. Info rec one per swimmer, a swimmer with multiple D0 records will have one D3 record following his/her first D0 record, contains new USS# and preferred first name.

G0-Split rec one or more per "D0", contains data on athlete name, ID, event ID, split time and interval.

E0-Relay event rec one per relay entry, contains data on relay event, team, times, places and lanes.

F0-Relay name rec four or more per "E0", contains data on the athlete name, ID, time, split, and session.

G0-Split rec one or more per "E0"

Z0-File terminator rec one per file, contains statistics and text information.

!!! SDIF VERSION 3 DOCUMENT !!!

At each indented level, the file may have multiple entries to transmit the data in a logical sequence. The order of the records may vary depending on the user's needs. Some records have limited data within the record, such as one submitted for meet entry. The same record would have more data added as the swimmer completes the event. New records would be added such as split records. Relay name records could be edited for a revised order of swimmers.

!!! SDIF VERSION 3 DOCUMENT !!!

Record Times Pyramid

To transmit Top 16 or other record times, the user may submit an A0 record, one or more D0 records, and a Z0 record. The D0 records may be followed by G0 split records if needed. For Top 16 only, multiple meets are allowed.

A0-File description rec first record in file, contains data on the file itself and identifies the vendor software.

D0-Individual Event Rec one per time achieved, contains swimmer ID, team, prelims/finals times.

D3-Individual Info Rec one per time achieved, contains new USS# and preferred first name.

G0-Split rec one or more per "D0", contains data on athlete name, ID, event ID, split time and interval.

Z0-File terminator rec one per file, contains statistics and text information.

Time Standards Pyramid

To transmit time standards, the user may submit an A0 record, one or more J0, J1, or J2 records, and a Z0 record.

A0-File description rec first record in file, contains data on the file itself and identifies the vendor software.

J0-Meet Qual rec one per event, contains times for all pool types.

J1-NAG Qual rec one per event and pool type, contains times for all levels AAAA through B.

J2-Motivation Qual rec one per event and level, contains times for SCY and LCM.

Z0-File terminator rec one per file, contains statistics and text information.

!!! SDIF VERSION 3 DOCUMENT !!!

LSC Registration Pyramid

To transmit membership registration data to the LSC, the user may submit an A0 record, one C1 record, one D1 and one D2 record per swimmer, and a Z0 record.

A0-File description rec	first record in file, contains data on the file itself and identifies the vendor software.
C1-TeamID rec	one per file, contains data on team name, code, address.
D1-Individ. Admin. rec	one per swimmer, contains swimmer info
D2-Individ. Contact rec	one per swimmer, contains remaining swimmer info
D3-Individ. Info rec	one per swimmer, contains new USS# and preferred first name.
Z0-File terminator rec	one per file, contains statistics and text information.

!!! SDIF VERSION 3 DOCUMENT !!!

A0 -- File Description Record

Purpose: Identify the file and the type of data to be transmitted. Contact person and phone number included to assist with use of information on the file.

This record is mandatory for each transfer of data within this file structure. Each file begins with this record and each file has only one record of this type.

start/ length	Mand	Type	Description
1/2	M1*	CONST	"A0"
3/1	M2*	CODE	ORG Code 001, table checked
4/8		ALPHA	SDIF version number (same format as the version number from the title page)
12/2	M1*	CODE	FILE Code 003, table checked
14/30			future use
44/20	*	ALPHA	software name
64/10	*	ALPHA	software version
74/20	M1*	ALPHA	contact name (person supplying or sending data)
94/12	M1*	PHONE	contact phone (area code and phone number of contact name in 74/20)
106/8	M1*	DATE	file creation or update
114/42			future use
156/2		ALPHA	submitted by LSC - for Top 16
158/3			future use

* required field for submission of registration data to LSC

!!! SDIF VERSION 3 DOCUMENT !!!

B1 -- Meet Record

Purpose: Identify the meet name, address, and dates.

This record is used to identify the meet name and address. The meet name is required, plus the city, state, meet type, start and end dates. Additional fields provide for the street address, postal code and country code. Each file may only have one record of this type.

start/ length	Mand	Type	Description
1/2	M1	CONST	"B1"
3/1	M2	CODE	ORG Code 001, table checked
4/8			future use
12/30	M1	ALPHA	meet name
42/22		ALPHA	meet address line one
64/22		ALPHA	meet address line two
86/20	M2	ALPHA	meet city
106/2	M2	USPS	meet state
108/10		ALPHA	Postal Code, meet zip or foreign code
118/3		CODE	COUNTRY Code 004, table checked
121/1	M2	CODE	MEET Code 005, table checked
122/8	M1	DATE	meet start
130/8	M2	DATE	meet end
138/4		INT	altitude of pool in feet above sea level
142/8			future use
150/1		CODE	COURSE Code 013, table checked, default course set up in exporting software
151/10			future use

!!! SDIF VERSION 3 DOCUMENT !!!

B2 -- Meet Host Record

Purpose: Identify the meet host or hosts, and host address.

This record is used to identify the meet host or hosts and the host address. The meet host name is required. Additional fields provide for the street address, city, state, postal code, country code and phone number.

start/ length	Mand	Type	Description
1/2	M1	CONST	"B2"
3/1	M2	CODE	ORG Code 001, table checked
4/8			future use
12/30	M2	ALPHA	meet host name
42/22		ALPHA	meet address line one
64/22		ALPHA	meet address line two
86/20		ALPHA	meet city
106/2		USPS	meet state
108/10		ALPHA	Postal Code, meet zip or foreign code
118/3		CODE	COUNTRY Code 004, table checked
121/12		PHONE	meet host phone
133/28			future use

!!! SDIF VERSION 3 DOCUMENT !!!

C1 -- Team Id Record

Purpose: Identify the team name, code and address. Region code defines USS region for team.

This record is used to identify the team name, team code, plus region. When used, more than one team record can be transmitted for a single meet. The team name, USS team code and team abbreviation are required. The USS region code is also required. Additional fields provide for the street address, city, state, postal code, and country code.

start/ length	Mand	Type	Description
1/2	M1	CONST	"C1"
3/1	M2	CODE	ORG Code 001, table checked
4/8			future use
12/6	M1	CODE	TEAM Code 006
18/30	M1	ALPHA	full team name
48/16		ALPHA	abbreviated team name
64/22		ALPHA	team address line one
86/22		ALPHA	team address line two
108/20		ALPHA	team city
128/2		USPS	team state
130/10		ALPHA	Postal Code, team zip or foreign code
140/3		CODE	COUNTRY Code 004, table checked
143/1		CODE	REGION Code 007, table checked
144/6			future use
150/1		ALPHA	optional 5th char of team code
151/10			future use

!!! SDIF VERSION 3 DOCUMENT !!!

C2 -- Team Entry Record

Purpose: Identify the team coach and the number of entries for the team.

This record is used to identify the team coach. When used, one team entry record would be submitted with the C1 team ID record. The USS team code and team coach field are required. Additional fields provide for the number of individual swimmers, number of splash records, number of relay entries, number of relay name entries and number of split records.

start/ length	Mand	Type	Description
1/2	M1	CONST	"C2"
3/1	M2	CODE	ORG Code 001, table checked
4/8			future use
12/6	M2	CODE	TEAM Code 006
18/30	M2	ALPHA	coach name
48/12		PHONE	coach phone
60/6		INT	number of entries (from this team) in the individual events, corresponds to number of D0 records
66/6		INT	number of different athletes on team
72/5		INT	number of entries (from this team) in the relay events, corresponds to number of E0 records
77/6		INT	number of relay swimmer entries (from this team), corresponds to number of F0 records
83/6		INT	number of split records (from this team) in relay and individual events, corresponds to number of G0 records
89/16		ALPHA	short team name for display purposes
105/45			future use
150/1		ALPHA	optional 5th char of team code
151/10			future use

!!! SDIF VERSION 3 DOCUMENT !!!

D0 -- Individual Event Record

Purpose: Identify the athlete by name, registration number, birth date and gender. Identify the stroke, distance, event number and time of the swims.

This record is used to identify the athlete and the individual event. When used, one individual event record would be submitted for each swimmer entered in an individual event. The athlete name, USS registration number, birth date and gender code are required. Fields for the stroke, distance, event number, age range, and date of swim are also required. Additional fields provide for the citizenship, age or class, seed time, prelim time, swim off time, finals time and pool lanes used in competition.

NOTE: Individual event records must be preceded by at least one C1 team ID record and one C2 team entry record. If these two records are missing, the individual is assumed to be attached to the previous "team" that has proper coding. Athlete registration data is not available to meet management programs and proper coding is essential.

start/ length	Mand	Type	Description
1/2	M1	CONST	"D0"
3/1	M2	CODE	ORG Code 001, table checked

125/2		INT	prelim heat number
127/2		INT	prelim lane number
129/2		INT	finals heat number
131/2		INT	finals lane number
133/3	**	INT	prelim place ranking

!!! SDIF VERSION 3 DOCUMENT !!!

start/ length	Mand	Type	Description
136/3	**	INT	finals place ranking
139/4	**	DEC	points scored from finals
143/2		CODE	EVENT TIME CLASS Code 014, table checked
145/1		ALPHA	flight status of swimmer (subdivision of Time Standard)
146/15			future use

* This field is mandatory IF the immediately preceding time field is NOT blank

** This field is mandatory (M1) if a championship meet (MEET Code 005 - 6,7)

Event age code 025, event sex code 011, event distance, stroke code 012 and seed time are not mandatory (M1) for relay only swimmers.

Note - An additional record type will be used for open water swimming. Multiple swim offs require multiple records.

!!! SDIF VERSION 3 DOCUMENT !!!

D1 -- Individual Administrative Record

Purpose: Identify the athlete by name, registration number, birth date and gender. Identify other administrative information.

This record is used to identify the athlete and his/her administrative information. When used, one individual administrative record would be submitted for each swimmer in the file. The athlete name, USS registration number, birth date and gender code are required.

start/ length	Mand	Type	Description
1/2	M1*	CONST	"D1"
3/1	M2*	CODE	ORG Code 001, table checked
4/8			future use
12/6	*	CODE	TEAM Code 006

74/1	M1*	CODE	SEX Code 010, table checked
75/30		ALPHA	first admin info field

!!! SDIF VERSION 3 DOCUMENT !!!

start/ length	Mand	Type	Description
105/20	*	ALPHA	fourth admin info field, used in submission of registration data for old member number if inits or birthdate change
125/12	*	PHONE	first phone number for swimmer
137/12		PHONE	second phone number for swimmer
149/8	*	DATE	date swimmer registered with USS
157/1	*	CODE	MEMBER Code 021, table checked
158/3			future use

* required field for submission of registration data to LSC

!!! SDIF VERSION 3 DOCUMENT !!!

D2 -- Individual Contact Record

Purpose: Identify the athlete by name. Identify mailing and contact information.

This record is used to identify the athlete and his/her contact information. When used, one individual contact record would be submitted for each swimmer in the file. The athlete name is required.

start/ length	Mand	Type	Description
1/2	M1*	CONST	"D2"
3/1	M2*	CODE	ORG Code 001, table checked
4/8			future use
12/6	*	CODE	TEAM Code 006
18/1		ALPHA	optional 5th char of team code
19/28	M1*	NAME	swimmer name

151/3		CODE	COUNTRY Code 004, table checked
154/1		CODE	REGION Code 007, table checked
155/1	*	CODE	ANSWER Code 023, Is swimmer also a member of another FINA federation?

!!! SDIF VERSION 3 DOCUMENT !!!

start/ length	Mand	Type	Description

156/1	*	CODE	SEASON Code 022, table checked, show which season swimmer is registered for
157/4			future use
* required field for submission of registration data to LSC			

!!! SDIF VERSION 3 DOCUMENT !!!

D3 -- Individual Information Record

Purpose: Contains additional information that is not included in pre version 3 SDI formats.

This record provides space for the new USS# as well as the swimmers preferred first name. For meet files this record will follow the D0 record and the F0 record if relays are included. A swimmer with multiple D0 records will have one D3 record following his/her first D0 record.

start/ length	Mand	Type	Description
1/2	M1	CONST	"D3"
3/14	M2	USSNUM	USS# (new)
17/15		ALPHA	preferred first name
32/2	*	CODE	ethnicity code 026
34/1	*	LOGICAL	Junior High School
35/1	*	LOGICAL	Senior High School
36/1	*	LOGICAL	YMCA/YWCA
37/1	*	LOGICAL	College
38/1	*	LOGICAL	Summer Swim League
39/1	*	LOGICAL	Masters
40/1	*	LOGICAL	Disabled Sports Organizations
41/1	*	LOGICAL	Water Polo
42/1	*	LOGICAL	None
43/118			future use

* Required for submission of registration data to an LSC

!!! SDIF VERSION 3 DOCUMENT !!!

E0 -- Relay Event Record

Purpose: Identify the relay team by name, USS team code, and gender. Identify the stroke, distance, event number, date and time of the swims.

This record is used to identify the team and the relay event. When used, one relay event record would be submitted for each relay squad entered in a relay event. The relay team name, USS team code, and gender code are required. Fields for the stroke, distance, event number, age range, and date of swim, are also required. Additional fields provide for the age or class, seed time, prelim time, swim off time, finals time, and pool lanes used in competition.

start/ length	Mand	Type	Description
1/2	M1	CONST	"E0"
3/1	M2	CODE	ORG Code 001, table checked
4/8			future use
12/1	M1	ALPHA	relay team name: one alpha char to concatenate with the abbreviated team name (48/16) in record C1 -- creates such names as "Dolphins A"
13/6	M1	CODE	TEAM Code 006
19/2		INT	number of F0 relay name records to follow
21/1	M1	CODE	EVENT SEX Code 011, table checked

F0 -- Relay Name Record

Purpose: Identify the athletes on a relay team by name, USS registration number, birth date and gender.
Identify the stroke, distance, event number, date, session and time of the swims.

This record is used to identify the athletes on a relay team and the relay order. When used, one relay name record is submitted for each relay athlete entered in a relay event. Alternates may be listed on additional records as an optional method of using this record. The relay team name, USS team code, and gender code are required. The Event ID # field (12/4) is required to properly identify the relay team to an event and to further link the splits for a relay athlete. Fields for the stroke, distance, event number, age or class, and date of swim, are also required. Additional fields provide for the seed time, prelim time, swim off time, finals time, and pool lanes used in competition.

NOTE: Relay name records must be preceded by at least one E0 relay event record. If this record is missing, the athlete on a relay team cannot be attached to the proper relay squad.

If the record is being sent for meet registration and team has not been finalized, this is NOT mandatory

* This field is mandatory IF the immediately preceding time field is NOT blank

!!! SDIF VERSION 3 DOCUMENT !!!

G0 -- Splits Record

Purpose: Identify the athletes in an event by name and USS registration number. Identify the split distance, number of splits and the split times of the swims.

This record is used to identify the athletes in an event and the split times. When used, one splits record would be submitted for each event that an athlete entered in a meet. The athlete name, USS registration code, and split distance are required. A split type code is required to identify the split as an interval or cumulative time. Ten time fields are provided to record the splits, and multiple records may be used to complete all splits for a long-distance event.

NOTE: Splits records must be preceded by at least one D0 individual event record or one F0 relay name record. If this record is missing, there is no way to connect the splits with the swim.

J0 -- Meet Qualifying Times Record

Purpose: Identify the qualifying times for each event of a meet.

This record is used to identify qualifying times for each event. When used, one meet qualifying times record would be submitted for each event in the meet. The first six fields are mandatory. At least one time and the age range are also required. Fields for the zone, meet and LSC codes are also provided.

for no limit)

last two bytes are upper age limit (digits, or "OV"
for no limit)

if the age is only one digit, fill with a zero
(no blanks allowed)

ETHNICITY Code 026

The first byte contains the first ethnicity selection.

The second byte contains an optional second ethnicity
selection.

If the first byte contains a V,W or X then the second
byte must be blank.

Q	African American
R	Asian or Pacific Islander
S	Hispanic
U	Native American
V	Other
W	Decline
X	No Response

!!! SDIF VERSION 3 DOCUMENT !!!

Coding Examples

The user of this interchange format has few limitations on the required records and the logical order. There are only two required records - the file description record "A0" and the file terminator record "Z0". These two records bracket a data transmission batch in a logical structure. Optional records have mandatory fields to provide essential information to understand and utilize the data supplied. Meet management applications will dominate the types of data transmissions. The format has been designed to accommodate other USS uses.

Meet Entry

Example - two teams in a dual meet. One team is the host and merges host team data with visiting team data. The visiting team provides an "A0" record, a "B1" record as a courtesy, a "B2" record as a courtesy, a "C1" record, a "C2" record, seventy-four "D0" and "D3" records for forty-eight swimmers, five "E0" records for the five relay entries, twenty-nine "F0" and "D0" records for relay swimmers and alternates, and a "Z0" record to close the file.

The host team merges a "C1" record, a "C2" record, sixty-three "D0" and "D3" records for fifty one swimmers, six "E0" records for six relay entries, thirty-five "F0" records for the relay swimmers and alternates, and a "Z0" record is shared from the visiting team submission. The diagram of the records is given below.

Visiting Team	Host Team
"A0" 1 record	(shares same record)
"B1" 1 dual meet	(shares same record)
"B2" 1 names host team	(shares same record)
"C1" 1 visiting team	"C1" 1 host team
"C2" 1 visiting team	"C2" 1 host team
"D0" -	"D0" -
"D3" 74 visiting athl-event	"D3" 63 host athl-event
"E0" 5 relay entries	"E0" 6 relay entries
"F0" 29 relay swimmers	"F0" 35 relay swimmers
"Z0" 1 record	(shares same record)

!!! SDIF VERSION 3 DOCUMENT !!!

Swimmers who have not completed the 120-day waiting period are coded with UNATTACHED status on the individual record, but they may still be associated with the team. The individual event records may be in any order for that team. The relay event records may be in any order but the relay name records must follow each relay event entry.

For meets with multiple teams the file would have the records for one team together as a group, then the second team and so on until all the teams are completed. Unattached swimmers who are not associated with a team would be grouped as an "unattached team" with a team ID record that indicates that the athletes are unattached.

It is the responsibility of the participating teams to provide complete and accurate data. The minimum required fields are noted with an "M" in the mandatory column in the Format Design section of this manual. The host may require more information to conduct the meet and teams should review the meet invitations closely.

!!! SDIF VERSION 3 DOCUMENT !!!

Meet results from the dual meet

"A0" 1 record for the meet with sanction number and text

"B1" 1 record for meet host data

"B2" 1 record for meet host data

"C1" 1 visiting team record

"C2" 1 visiting team record

"D0" 64 records for visiting team

"G0" 31 records for splits from individual swims

"E0" 5 relay records for visiting team

"F0" 20 relay name records for competing swimmers

"G0" 4 split records for 4 swimmers on lead off

"C1" 1 host team record

"C2" 1 host team record

"D0" 61 records for host team

"G0" 22 records for splits from individual swims

"E0" 4 relay records for host team

"F0" 16 relay name records for host team

"Z0" 1 terminator record for the meet.
